PROFESSIONAL SUMMARY

Software Engineer specializing in mobile platforms with 7+ years of experience designing and shipping high-performance applications across Android (Kotlin, Jetpack Compose), iOS (SwiftUI), and cross-platform technologies (Flutter and Kotlin Multiplatform). Experienced in building production applications published on both the Play Store and App Store, with a focus on scalable architecture, performance optimization, and maintainable codebases.

My expertise spans MVVM, Clean Architecture, modular application design, CI/CD, and end-to-end feature delivery across cross-functional engineering teams. I also build AI-powered mobile experiences, integrating LLM-powered features into production mobile applications, including conversational assistants, intelligent document processing, recommendation systems, and on-device machine learning.

Focused on designing scalable mobile systems, improving developer productivity, and delivering reliable production software, easy to evolve as products grow.

PROFESSIONAL EXPERIENCE

Senior Mobile Engineer · Enyata — Software Development Company Jan 2026 – Present

- Delivering native Android (Kotlin / Jetpack Compose) and iOS (SwiftUI), alongside cross-platform (Flutter) features across multiple client products, maintaining 99.8% crash-free sessions in production.
- Integrated an LLM-powered in-app code suggestion engine using Claude/OpenAI APIs, providing context-aware completions across both Android and iOS clients.
- Built and shipped 4 fintech mobile applications across Android and iOS platforms, supporting production deployments for payment, wallet, and financial management systems used in real-world user environments.
- Established shared mobile engineering practices, CI/CD pipelines, and code review standards supporting 20+ production deployments monthly.

Senior Mobile Engineer · Product Strategy · Stealth Startup (Confidential) Sep 2025 – Jun 2026

- Sole mobile engineer on a 5-person team; designed and shipped the full Android (Kotlin) and iOS (SwiftUI) client from scratch, achieving App Store and Play Store releases within the same sprint cycle.
- Built the core AI product: an NLP pipeline for document parsing and summarisation, plus a smart recommendations engine, integrated natively into both mobile clients via LLM API calls.
- Designed agentic workflows to orchestrate multi-step AI tasks (parse -> summarize -> recommend), enabling autonomous document processing and insight surfacing across platforms.
- Leveraged on-device ML (TensorFlow Lite / ML Kit) for latency-sensitive inference; architected a multi-tenant Supabase backend handling auth, real-time sync, and APIs. Shipped 2 releases/month at 99% crash-free users..

Senior Mobile Engineer · EasySpend (Part-time) Aug 2025 – Sep 2025

- Delivered the Virtual USD Account feature across Android and iOS, enabling users to create and manage dollar-denominated virtual accounts — shipped within a single sprint.
- Drove crash-free users from 97.6% to 99.3% across both platforms by integrating Sentry, Facebook App Events, and Microsoft Clarity for unified production monitoring and analytics.

- Shipped 1 production release, resolving cross-platform stability bottlenecks in close collaboration with product and backend teams.

Senior Mobile Engineer · [Xanadu Digital Solutions](#) *Jul 2024 – Jun 2025*

- Established Android and iOS mobile infrastructure from scratch for fintech products within a 9-person team, delivering a shared modular architecture that reduced onboarding time for new engineers.
- Implemented GitHub Actions CI/CD pipelines for both Android and iOS, automating build, test, and lint stages to streamline multi-platform releases.
- Coordinated cross-platform consistency with web teams to ensure a unified product experience across all surfaces.

Mobile Engineer · [Groove HQ](#) *Aug 2022 – Dec 2024*

- One of 16 engineers; established the Flutter cross-platform infrastructure targeting both Android and iOS, serving as the foundation for all subsequent mobile feature development.
- Improved crash-free users from 86% to 94% by introducing structured error handling and strengthening pre-release testing.
- Delivered pixel-perfect, responsive UI layouts and participated in recruiting and mentoring junior mobile engineers.

Android Engineer · [Grynd Tech Inc. \(Remote, US\)](#) *May 2021 – Sep 2024*

- Built and maintained native Android apps and internal Kotlin frameworks across a 7-person distributed team, focusing on performance, scalability, and clean architecture.
- Increased crash-free users by 12% through local caching strategies that reduced data usage and load times; set up Mockito/Espresso automated testing workflows.
- Developed modular MVVM architecture and Jetpack UIs; integrated Stripe, Firebase, and Retrofit to extend app capabilities reliably.

Android Engineer · [K-PIE Technologies](#) *Nov 2020 – May 2021*

- Shipped features in Java and Kotlin across multiple Android apps, contributing to a ~20% lift in user satisfaction based on in-app feedback and Play Store review trends.
- Proactively resolved defects that reduced support ticket volume and improved app stability; integrated ExoPlayer, Picasso, Sinch, Sentry, and Google Play Services.

Android Engineer · [HyCab Taxi](#) *Nov 2019 – Jun 2020*

- Architected Android features for a ride-hailing app, optimising performance across diverse device profiles and integrating Google Maps, Mapbox, Google Places, and OpenStreetMap APIs.

Software Engineering Intern · [Hotels.ng](#) *Aug 2019 – Nov 2019*

- Identified and resolved bugs, improved performance, and debugged production issues via log file and stack trace analysis within a distributed engineering team.

Freelance Mobile & Web Engineer · [Self-employed \(Remote\)](#) *Sep 2018 – Jul 2019*

- Designed, built, and maintained Android and web applications for multiple clients across the full project lifecycle, from requirements through to delivery.

TECHNICAL SKILLS

Languages: Kotlin · Java · Swift · Dart · JavaScript (Node.js)

Android: Jetpack Compose · Android SDK · RxJava · Hilt · Retrofit · OkHttp · Data Binding · Glide · Firebase · Play Services · REALM · Auth0 · Gradle

iOS: SwiftUI · Xcode · App Store Connect · Swift Package Manager

AI / ML: LLM API Integration (Claude, OpenAI) · Agentic Workflows · NLP Pipelines · On-device ML · TensorFlow Lite · ML Kit · GitHub Copilot · Cursor

Cross-Platform: Flutter · Kotlin Multiplatform (KMP)

Architecture: MVVM · MVP · Clean Architecture · Modular Design

Testing: TDD · Mockito · Espresso · XCTest · Appium · Unit & Integration Testing

DevOps / CI-CD: GitHub Actions CI/CD · Firebase App Distribution · Fastlane · Sentry

Backend: Ktor · Spring Boot · Node.js · Nest.js

DB: CockroachDB · Supabase · MongoDB

APIs: RESTful · SOAP · GraphQL

EDUCATION

MSc, Computer Science · Federal University of Technology Owerri (FUTO) 2024

In Progress

B.Tech, Financial Management Technology · Federal University of Technology Owerri (FUTO) 2010 – 2016

CERTIFICATIONS

- Andela Learning Community — Learning Community Mentor Certification
- Andela Learning Community — Advanced Android Development
- OpenClassrooms — Go Full-Stack With Node.js, Express, and MongoDB
- OpenClassrooms — Build Web Projects with REST APIs
- OpenClassrooms — Web Security with OWASP

AWARDS & AFFILIATIONS

- Fellow — Institute of Management Consultants of Nigeria
- Andela Ambassador — Google Scholarship for Africa with Andela (Mar 2018 – Dec 2022): organised community meet-ups across Imo State and mentored software engineering students from multiple African regions.
